- Title: Alma LMS
- Who: Stanislaw Jaroszynski
- Project Tracker: text file
  Screenshot:

```
25 - Foundation
26    - Large backing
27 - Semantic UI
28    - Complicated?
29    - Heavy JS?
30    - Last release a year ago
31    - Not used by much
32 - UIKit
33    - Many components
34    - Too minimal style
35    - Actively developed
36 - Element ui
37    - Integrates with vue.js
38 - Materialize.css
39    - Has 'tag input' with completion but no dropdown
40    - Following theme adds more stuff: Con Material Admin Dashboard
41       - https://themeforest.net/item/con-material-admin-dashboard-template/10621512?re
42       - Kinda just aggregates and themes a bunch of plugins... (doesn't even theme all
43       - Look through to find good plugins
44       - Does have angular support tho
45 - Django-material *
46    * Can look at example forms.
47       - http://forms.viewflow.io/demo/registration/
48    - Django specific material toolkit
49    - uses materialize.css
50    - looks good
51    - http://forms.viewflow.io/
52 - django-crispy-forms
53    - more generic form rendering engine
54    - http://django-crispy-forms.readthedocs.io/en/latest/
55 - Material Design Light
56    - Another material css framework
57 - material.io
58    - Official from google
59    - meh
60 - Extensions/Plugins
61    - Select2
62       - Offers 'pillbox' support!
63    - jQuery-Tags-Input
64       - Autocomplete?
65    - dropzonejs
66       - file upload library!
67    - fullcalendar.io
68       - Opensource calendar!
```

- VCS: https://github.com/StasJ/CSCI3308

- Deployment: http://almaedu.hopto.org/

If need be, the site can be reset to its default showcase state by going to http://almaedu.hopto.org/reset . This should reset the database to a prepared version if a rogue user messes it up.
